# Visualizing Research

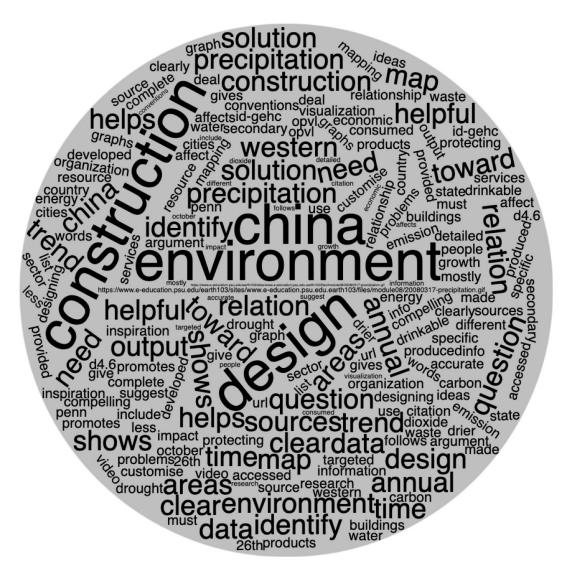

Data and questioning

## Word cloud (note template)

- Largest: Connection, construction, infrastructure, economic, and growth
- Least: development, sustainability, technology, regulation, development
- What surprised you: connection appeared to be the largest
- What's missing: there are not much words that is related to my third supporting question: what is the importance of standard regulations?
- Are the large words part of supporting or compelling question:
  yes, most of the large words are
- Are the small words part of supporting or compelling question:
  yes, many of the small words have some connection to my Sq
- What refinements should be made to the research: change my sq 3 so that it connects to growth and development

#### D1.5 table

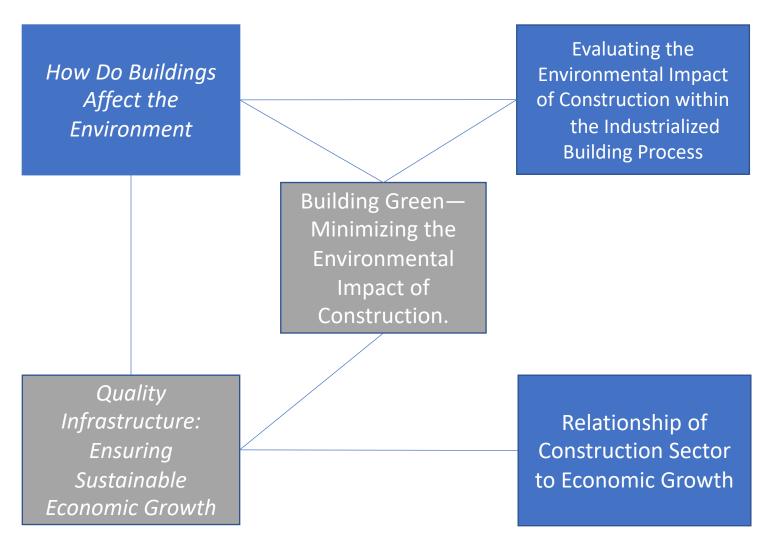

- Largest: environment, construction, china, design, solution
- Least: resource, trend, growth, accurate, economic
- What surprised you: economic only appeared once
- What's missing: the words mainly addresses the sq What harm could construction do to the environment?
- Are the large words part of supporting or compelling question: some are connected to my compelling question
- Are the small words part of supporting or compelling question: most are connected to one of my supporting question

What refinements should be made to the research: find more helpful source that addresses the supporting questions:

- What has caused the housing construction industry to enlarge?
- what is the importance of standard regulations?

### Source networking

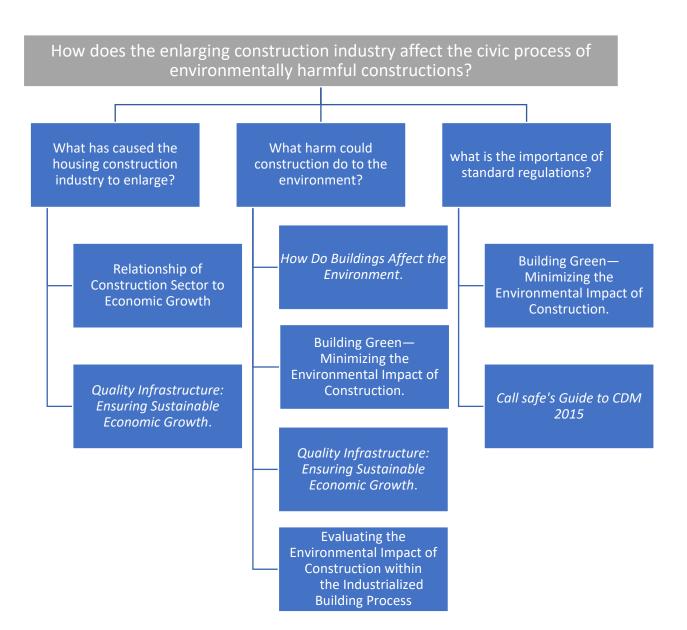

Callsafe's Guide to CDM 2015

#### So...

- I need to find another source that connects to the source "Call safe's Guide to CDM 2015"
- I need to analyze "Building Green— Minimizing the Environmental Impact of Construction" based on different disiplines.

### Focus hierarchy

#### So...

- I need to focus on adding more strongly related source to the SQ 'what is the importance of standard regulations?'
- I need to make the connection to discipline and OPVL with 'Building Green— Minimizing the Environmental Impact of Construction.' and 'Quality Infrastructure: Ensuring Sustainable Economic Growth.' more specific
- Both of these sources are also strongly connected to other sources as shown in the source networking
