# HIGH BEAM LIMITERS

Circumstances under which negligent drivers blind others with HighBeam have remained an unresolved issue for years, resulting in auto accidents that could've been avoided if the driver were aware of his mistake.

To prevent this, I'm proposing to install HighBeam limiters in Volkswagen cars, controlling the intensity of light depending on the driver's profile.

We can all drive safer and better at night, without endangering the lives of others.

High-beam limiters
