

Bomb

DATE

NO.

Central Idea: Developing an atomic bomb

Chain reactions: a group of gangster school students are on a mission in Norway.

During Norway invasion, the gangstermen were on a mission but they landed outside of Norway, because of tech failure, this is a minor detail because it shows technology and other mechanic type things weren't just that productive and successful at that time.

DG 98-99

a bomb (atomic bomb) works when it is assembled all together when a tamper (mechanic that will shove 2 pieces of uranium together) is put with two uranium.

when it is going to explode, the tamper will shove a piece of uranium towards the other piece making speeding atoms along the way, creating a fission/explosion.
