

My Bluetooth Speaker

Inspirations

- My Bluetooth speaker uses modern design. It uses monochromatic color, which is dark brown and black. The cover at the top is to add some extra details while making it feel more modern.

Justifications

- I chose to stain my speaker because it makes it feel more expensive while having a modern feeling
- The cover at the top is to cover the speaker itself, making it look better, while making it more modern.
- Some things that I might try to change if I was going to design this speaker again is to change the cover at the top. The cover is slightly big for the speaker, and I glued it slightly to one direction so the cover is not in the middle.
